Audio Studio - Turning Works into Audio

In the Audio Studio, you can turn your works into audiobooks – with AI voices, music and sounds.

Creating an Audiobook

1. Open the **Audio Studio**.
2. Select the work you want to record (from the Studio).
3. The Audio Studio derives a speaking script from it – who says what.

Assigning Voices

- Assign suitable **voices** to the characters and the narrator.
- Listen to a short preview before recording a whole chapter.

Music and Sounds

- In the **Music & Beats** section, you can create simple background music.
- **Sound effects** add accents in the right places.

Exporting and Offering

- Finished audiobooks can be downloaded as a file (for example as M4B with chapter markers).
- You can also offer an audiobook as its own product in the **Shop**.

Tip: Recording consumes credits depending on length. Individual chapters can be published for free so that listeners can tune in.
