Games - Build Your Own Games

With the Games builder, you can create your own games that others can play directly in the browser – no programming knowledge required.

Creating a Game

1. Open the **Games** section and select **Create**.
2. Choose a game type:
 - **Quiz** – Questions with multiple answers.
 - **Knowledge Duel** – Quiz with time pressure and point streaks.
 - **Memory** – Find pairs of images or terms.
 - **Jump'n'Run** – A jumping game with levels.
3. Enter an idea – the AI will generate a playable basic framework from it.

Customising

- Edit questions, levels, or pairs directly in the editor.
- For Jump'n'Run, you can build your own levels in the **Grid Editor** and use the **Framework** button to generate a suggestion.
- Add your own graphics via the **Sprite Library**.

Publishing and Playing

Publish your game so it appears in the **Gallery**. Every game has a **Leaderboard** – logged-in players can enter their scores there.

Note: Game content is generated in English. AI features consume credits (see **Account & Subscription**).
