How VCF-MADE works

VCF-MADE is your creative platform: here you create stories, images, audiobooks and games, publish them and can even sell them. This overview shows how the areas work together.

The areas at a glance

- **Studio** – your workshop for stories, manga and images. Here you write chapters and let the AI help you with text and illustrations.
- **Audio Studio** – transforms your works into audiobooks with real voices, music and sounds.
- **Games** – a construction kit for your own games (quiz, knowledge duel, memory, jump'n'run) that others can play directly online.
- **Tools** – free mini-tools such as a QR code generator or avatar creator.
- **Library** – here you publish your works and discover what others have created.
- **Shop** – buy finished works or sell your own.
- **Account & Subscription** – here you manage your balance, your subscription and your own AI keys.

A typical journey

1. You create a work in the **Studio**.
2. You optionally add audio in the **Audio Studio**.
3. You publish it in the **Library** – with one click it also becomes a listing in the **Shop**.
4. Others discover, read, listen to or buy your work.

Balance and subscription

AI functions (texts, images, voices) consume balance. You can top up your balance or take out a subscription – or store your own API keys (BYOK), in which case you are billed directly by the provider. You can find everything about this under **Account & Subscription**.

Happy creating!
